## OBJECTIVE

An ambitious and forward-thinking software engineer with a passion for building robust, scalable systems and driving technical initiatives from concept to delivery. With strong full-stack development experience and a problem-solving mindset, I bring the ability to move beyond implementation into roles that require ownership, coordination, and technical leadership. I combine hands-on engineering expertise with an understanding of business and product needs, enabling me to contribute to system architecture, strategic decision-making, and team alignment. I am seeking opportunities where engineering excellence, product vision, and execution come together, allowing me to take on greater responsibility and grow toward senior technical and organizational leadership.

## EDUCATION

**BSc Hons Computing | Islington College ( London Metropolitan University )**  
2023 | Kamal Pokhari, Kathmandu

**GCE A Level | Little Angle's College ( Cambridge University )**  
2019 | Hattiban, Lalitpur

**SEE | Little Angle's School ( NEB )**  
2016 | Hattiban, Lalitpur

## TECHNICAL SKILLS

### Backend Development

- PHP (Laravel), Livewire
- RESTful API design & integration
- MVC architecture & modular application design

### System Design & Data Management

- Database design (PostgreSQL/MySQL)
- Query optimization & performance tuning
- Role-Based Access Control (RBAC)
- Dynamic forms & complex validation logic

## Deployment & System Operations

- Linux-based application deployment
- Production issue debugging & troubleshooting
- Environment configuration & release handling

## Product & Client Collaboration

- Requirement analysis & client communication
- Translating business needs into technical solutions
- System demonstrations, training & user support

## Testing & Documentation

- Manual testing & QA support
- Technical documentation & API documentation
- User manuals and training materials

## Leadership & Team Contribution

- Mentoring junior developers
- Code review & development guidance
- Cross-team collaboration
- Problem-solving & decision-making

## SOFT SKILLS

- Communication
- Teamwork
- Time Management
- Problem Solving
- Adaptability
- leadership

## EXPERIENCE

### Backend Developer Intern | N-Cash

November 2022 - January 2023

During my internship as a backend developer at a fintech company, I gained expertise in Laravel for backend development and understood the MVC architecture. I also developed crucial soft skills for effective collaboration and communication with cross-functional teams. Problem-solving and troubleshooting became second nature in the complex fintech environment. Additionally, I became adept at implementing APIs, optimizing application performance, using Git for version control, and emphasizing documentation for efficient knowledge sharing. Overall, this internship equipped me as a well-rounded backend developer ready for future projects.

## **Backend Developer | N-Cash**

February 2023 - August 2023

In my prior position at the company, I was responsible in supporting the development of our e-wallet system. A substantial portion of my responsibilities involved developing and maintaining an extensive set of APIs that were critical to the e-wallet's functionality. These APIs not only eased operations within the e-wallet, but also enabled smooth interaction with third-party payment service providers, increasing the system's versatility and accessibility. I worked directly with both the web and mobile development teams to ensure that these APIs were seamlessly integrated into our applications, resulting in a consistent and efficient user experience. Furthermore, I took the lead in carefully testing these APIs, exhaustively identifying and fixing any bugs to ensure their reliability and efficiency. I was also in charge of generating comprehensive API documentation to ensure that both internal and external stakeholders could properly utilize these APIs for their respective requirements.

## **Backend Developer | Ninja Infosys**

February 2025 – March 2026

I have extensive experience working on Nepal's e-Governance systems, contributing to the development, deployment, and continuous improvement of digital solutions for multiple government offices. While my core role involved backend development using Laravel and building reactive interfaces with Livewire, my responsibilities evolved beyond engineering into project and product-oriented functions. I actively collaborated with clients throughout the project lifecycle—conducting requirement analysis, translating business needs into technical solutions, gathering feedback, and iterating on system improvements. This close engagement enabled me to ensure that delivered solutions aligned with real-world administrative workflows and user expectations.

In addition to development, I took ownership of broader delivery responsibilities including system testing, documentation, product presentations, end-user training, and bulk data handling. I played a key role in maintaining product quality and usability while ensuring smooth adoption across different stakeholders. I also contributed as a team lead by mentoring junior developers, guiding implementation approaches, and ensuring consistency in code quality and architecture. Working in a fast-paced environment, I simultaneously managed multiple systems—including e-Governance platforms and ICMS—handling issue resolution, coordinating updates, and ensuring system stability. Furthermore, I was responsible for deploying applications to servers, troubleshooting production issues, and resolving infrastructure-related challenges, which strengthened my practical understanding of system operations and reliability. Through these experiences, I have developed strong problem-solving, communication, and leadership skills, enabling me to bridge the gap between technical teams and business stakeholders while driving projects toward successful delivery.
